

INSTRUCTIONS FOR INSTALLING UBUNTU OS ON

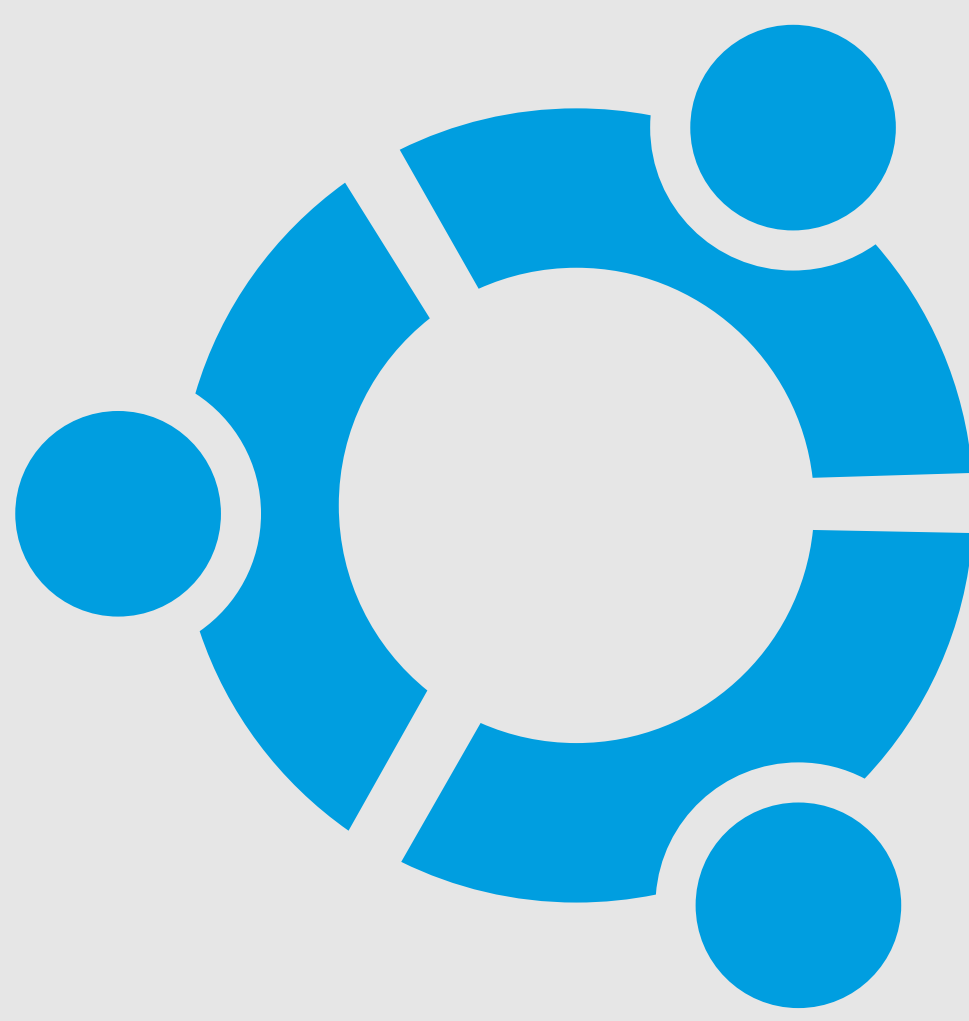

WITH YOUR MAC

1 What do you need?

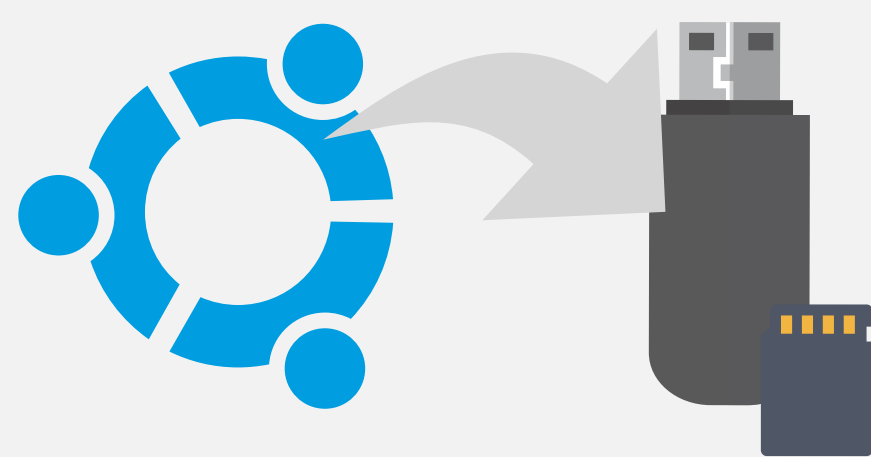

a USB flash drive
or
a micro SD

Ubuntu

a disk imager

>> UNetbootin <<

There are various ways to write an OS on an external device. Here we will see how to do it with [UNetbootin](#).

2 Download Ubuntu & UNetbootin

A Ubuntu

Scan it

or
<https://goo.gl/dZR51D>

Choose the following features

Ubuntu xx.xx

64bit

Desktop

B UNetbootin for Mac OS X

Scan it

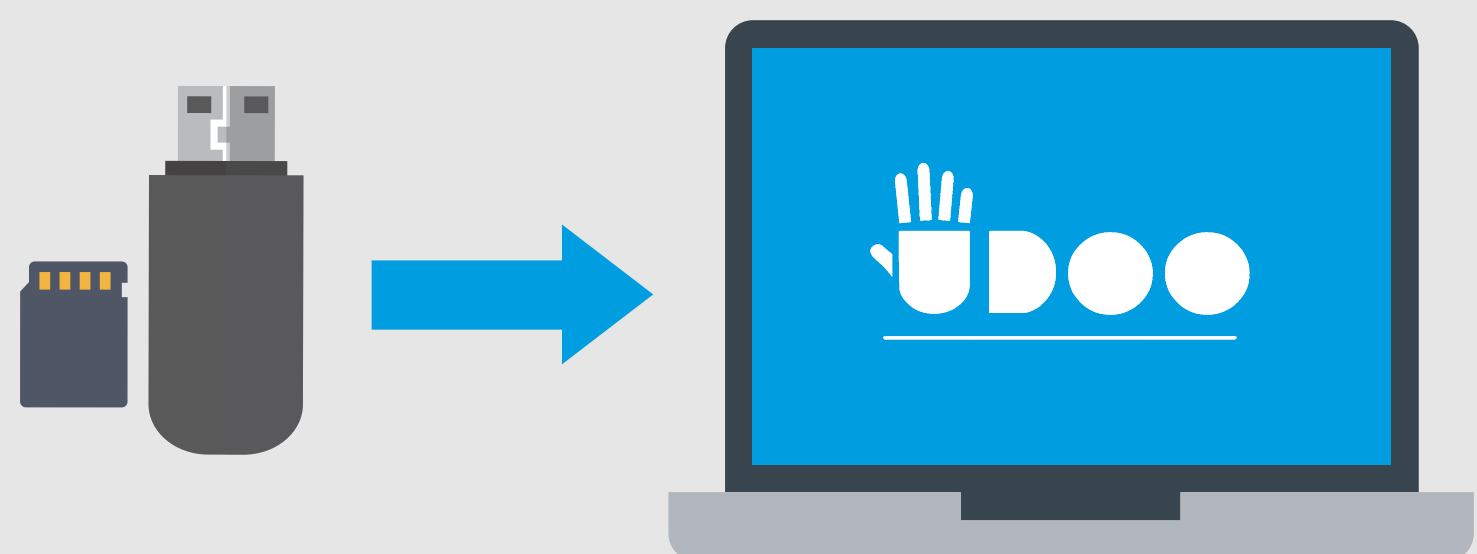

or
<https://goo.gl/oCjtC2>

Install UNetbootin on your computer, you will need it later on!

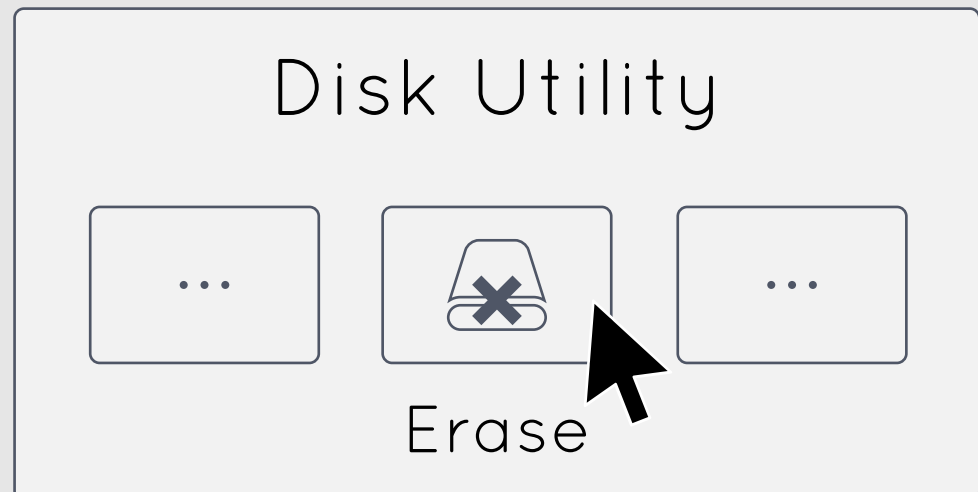

3 Create a bootable USB flash drive/micro SD

A Insert the USB flash drive or the micro SD card into your computer

B Format your USB flash drive or micro SD card

- > Open the **Disk Utility** of your mac
- > Choose the **drive** that you are using
- > Click on «**Erase**»

C Once it appears, fill the formatting window as follows :

Erase «USB Flash Drive»

Name :

Format :

Scheme

Choose the following elements

D Write Ubuntu on your USB flash drive/micro SD using the disk imager **UNetbootin**

UNetbootin

☒ Diskimage

Space used to preserve files across reboots (Ubuntu only) MB

Type: Drive:

Select the drive to which you want to install Ubuntu

Search the Ubuntu file on your computer

E When your USB flash drive/micro SD is written, **unplug it**
